ANNEXES CONTENT

STATISTICAL ANNEX

SDG 1 - NO POVERTY	4
SDG 2 - ZERO HUNGER	8
SDG 3 - GOOD HEALTH AND WELL-BEING	11
SDG 4 - QUALITY EDUCATION	17
SDG 6 - CLEAN WATER AND SANITATION	29
SDG 7 - AFFORDABLE AND CLEAN ENERGY	31
SDG 8 - DECENT WORK AND ECONOMIC GROWTH	32
SDG 9 - INDUSTRY, INNOVATION AND INFRASTRUCTURE	36
SDG 10 - REDUCED INEQUALITIES	39
SDG 12 - RESPONSIBLE CONSUMPTION AND PRODUCTION	46
SDG 13 - CLIMATE ACTION	49
SDG 14 - LIFE BELOW WATER	51
SDG 15 - LIFE OF LAND	54
SDG 16 - PEACE, JUSTICE, AND STRONG INSTITUTIONS	56
SDG 17 - PARTNERSHIP FOR THE GOALS	63

GOOD PRACTICES SDG 3 - GOOD HEALTH AND WELL-BEING 66

A. Strengthening Reproductive Health Programme to Improve Factory Workers' Productivity through "WEALTH"	66
B. Floating Integrated Health Posts (<i>Posyandu Terapung</i>) – Breaking Barriers, Reaching Hope in the Katingan Mentaya Peat Swamp Forest	66
C. Floating Nutrition Gardens (<i>Kebun Gizi Apung</i>): A New Hope for the Children of Asmat	67
D. Muhammadiyah Enhancing the Health and Well-being for Communities in Need Communities Locally and Globally by PP Muhammadiyah	67
E. <i>Tentang Anak</i> App: A Comprehensive, Expert-Based Solution for Optimal Child Development	68
F. YOUNG HEALTH PROGRAMME: Empowering Youth to Prevent Non-Communicable Diseases in Jakarta	69

GOOD PRACTICES SDG 5 - GENDER EQUALITY 70

G. STRENGTHENING THE ECONOMIC RESILIENCE OF WOMEN SURVIVORS AND AT-RISK COMMUNITIES ECONOMIC MENTORING	70
H. Sisternet: Supporting Women's Economic Independence and Participation	70
I. Campus Caring for SDGs: Economic Empowerment for Persons with Disabilities	71
J. PITA MOLIN: Services, Information, and Consultation through the Protection Van	71
K. Green Skills Programme: Young Women Farmer Entrepreneurship as a Solution to the Water Crisis in East Nusa Tenggara	72
L. Data-Driven Advocacy Movement to Support SDGs Achievement, Advancing SDG Goal 5	73

GOOD PRACTICES SDG 8 - DECENT WORK AND ECONOMIC GROWTH	74
M. Enhancing Inclusive Employment through the “Teach4Hope” Programme	74
N. BUMMas Rumah Bambu Weragati	74
O. All-Learn (Inclusive Learning for All) Supporting Goal 8: Decent Work and Economic Growth	75
P. Culinary Camp : Building the Future ff Indonesia’s MSMES.....	75
Q. Labour-Intensive Programme of Surabaya City	76
R. Processing Suckermouth Catfish in Lake Tempe.....	76
GOOD PRACTICES 14- LIFE BELOW WATER	77
S. Desa Lestari	77
T. Planting Hope on the Coast with KONSURV	77
U. Sustainable Undersea Cable Operation and Carbon Offsetting Initiatives	78
V. Greening Indonesia Together	79
W. Fish Bank Indonesia: A Community-Based Solution to Coral Reef Degradation in Banyuwangi	79
X. Community Empowerment Training by Banten Maritime Polytechnic.....	80
Y. MECOK Ecopark Mangrove Ecotourism – Diponegoro University’s Mini SDGs Park in Teluk Awur, Jepara: KeSEMaT’S Synergy in Mangrove Ecosystem Management.....	80
GOOD PRACTICES SDG 17 - PARTNERSHIPS FOR THE GOALS.....	81
A. Multisectoral Approach to Inland Fisheries Management in Sukabumi Regency	81
B. Indika Foundation Impact Grant	81
C. EDUTABMU: Working Together to Deliver Quality Education	82
LIST OF PARTIES INVOLVED IN THE PREPARATION OF VNR INDONESIA 2025.....	83

STATISTICAL ANNEX - VNR INDONESIA 2025

GOAL 1

NO POVERTY

3 GOOD HEALTH AND WELL-BEING

A. Strengthening Reproductive Health Programme to Improve Factory Workers' Productivity through "WEALTH"

by United Nations Population Fund (UNFPA), Indonesian Planned Parenthood Association (Perkumpulan Keluarga Berencana Indonesia or PKBI) DKI Jakarta, and H&M

Since 2021, UNFPA Indonesia, in collaboration with PKBI DKI Jakarta and the H&M Group, has implemented the Women's Health and Well-Being (WEALTH) programme in two factories, PT Hop Lun in Semarang and PT Doosan Jaya in Sukabumi, to increase knowledge on reproductive health, gender equality, and workplace well-being. The initiative aims to foster a safe, inclusive work environment, strengthen company policies to prevent gender-based discrimination and violence, and support the achievement of SDGs 3 and 5.

The programme uses a multi-level approach, beginning with capacity-building training for employees, including female workers and team leaders, who are then equipped to act as peer educators, enabling effective information dissemination in the workplace. Periodic health education sessions follow, covering reproductive health, bodily autonomy, gender equality, and workplace rights. Workers also receive health screening services, including cervical cancer (IVA) examinations and HIV testing, supporting early detection and prevention. The programme benefits all factory workers, particularly young women who previously had limited access to reproductive health information.

Rahmawati, Head of the Sustainability Division at PT Hop Lun, faced challenges in embedding a long-term health programme. Training sessions were often seen as disruptive to production, and issues like bullying and body shaming created an unhealthy work environment.

Nevertheless, the programme has significantly improved awareness of gender issues and reproductive health among female workers, while reducing bullying and discrimination. A Return on Investment (ROI) analysis tool developed by UNFPA Asia and the Pacific Regional Office (APRO) showed reduced absenteeism and increased productivity. Health education is now integrated into factory policies, supporting the programme's long-term sustainability.

The WEALTH programme aligns with UNFPA Indonesia's efforts to support the Government of Indonesia in enhancing the health, gender equality, and well-being of workers, particularly women. By integrating reproductive health and gender equality education into corporate policies and training, the initiative offers strong potential for replication and sustainable implementation across other industrial sectors.

B. Floating Integrated Health Posts (*Posyandu Terapung*) – Breaking Barriers, Reaching Hope in the Katingan Mentaya Peat Swamp Forest

by PT. Rimba Makmur Utama – *Katingan Mentaya Project*

In the expansive peatland forest between the Katingan and Mentaya Rivers in Central Kalimantan, eight villages supported by the Katingan Mentaya Project (PT RMU) face severe accessibility challenges. Land routes are often impassable during the rainy season, and boats are the only viable mode of transport, though costly and time-consuming, making access to health services extremely difficult.

Medical facilities in these villages are limited. Medicines are often unavailable, equipment is minimal, and health workers visit irregularly. As a result, villagers must choose between enduring illness or traveling long

distances, turning health into a matter of survival.

To address this, since 2020, the RMU–Katingan Mentaya Project has partnered with local health centers (UPTD Puskesmas) and village governments to launch the Floating Integrated Health Post (Posyandu Terapung), a mobile boat-based service

reaching approximately 1,000 people in eight villages. This service delivers basic health checkups, nutrition monitoring, disease screening, and family education on clean and healthy living (Perilaku Hidup Bersih dan Sehat or PHBS) and environmental health.

Since 2019, Ms. Suniarni, a nurse at Baun Bango Health Center, has witnessed the tangible impacts of the initiative. She notes that Posyandu Terapung integrates services for older persons and disease screening into single visits. Community health cadres have become more independent, participation has increased, and sanitation education, such as guidance on building healthy latrines, has been reinforced.

The Posyandu Terapung is more than a mobile clinic. It functions as a traveling platform for health, education, and equality, responding to the most basic needs of underserved communities. It contributes directly to

the achievement of SDGs 3, 4, and 5 in the heart of Indonesia's peat swamp forest.

C. Floating Nutrition Gardens (*Kebun Gizi Apung*): A New Hope for the Children of Asmat by Wahana Visi Indonesia

Amid the tidal swamps of Asmat in South Papua, where frequent flooding regularly submerges the land, a simple innovation has brought new hope. With support from 3M Indonesia, Wahana Visi Indonesia (WVI) launched the Floating Nutrition Garden (*Kebun Gizi Apung*) programme from October 2022 to April 2023 to address the challenges of malnutrition and food insecurity. Initially, gardens were planted on soil beds near houses. However, these were frequently damaged by floods. In response, WVI worked with local communities to develop floating gardens, which are wooden structures that remain buoyant on water and protect

crops from inundation. WVI also provided food assistance, training, seeds, and ongoing support to sustain the initiative. The programme benefited 84 children and 225 adults from 236 households in two regencies and four villages.

Perhaps the most profound impact has been a shift in community mindset. While previous harvests were often sold, parents are now encouraged to prioritise their children's nutrition, especially for toddlers. Planting and harvesting have become a daily habit.

The *Kebun Gizi Apung* programme also received support in the form of vegetable seeds from the Regency Agriculture Office. WVI continues to strengthen collaboration with local governments and encourages communities to access resources from relevant offices. The programme is not only about farming. It is

about resilience, local knowledge, and building a healthier future for the children of Asmat.

D. Muhammadiyah Enhancing the Health and Well-being for Communities in Need

E. Locally and Globally by PP Muhammadiyah

Inequitable access to healthcare among low-income and underserved populations has been the driving force behind Muhammadiyah's health service movement since 1923. Inspired by the theology of al-Ma'un in the Qur'an, which emphasizes the protection individuals experiencing socio-economic hardship and exclusion, Muhammadiyah has worked for over a century to expand access to quality and affordable healthcare. The organisation focuses particularly on underprivileged groups, underserved and remote communities (3T), women, orphans, older persons, persons with disabilities, and individuals with mental health conditions. These efforts contribute to Muhammadiyah's social service trilogy of "Schooling, Feeding, Healing" and support SDGs 1, 2, 3, 5, 6, 10, 16, and 17.

Muhammadiyah's strategic approach has produced some great practices such as strengthening the capacity and professionalism of community health cadres through the promotion of altruistic values, improving hospital and clinic management, developing an integrated health information system through the SehatMu application, and establishing new healthcare facilities. It has also procured medical equipment through innovative partnerships and in-house research, while offering school and community-based primary care and health promotion services. At present, Muhammadiyah operates 125 hospitals and 231 clinics across Indonesia.

Persistent challenges include disparities in infrastructure and human resources across regions, high service quality expectations, issues with National Health Insurance (Jaminan Kesehatan Nasional or JKN) financing, and underdeveloped digital integration. Addressing these will require continued collaboration with government and other partners.

Muhammadiyah currently serves an average of 12.5 million patients per year, with satisfaction rates ranging from 79 to 85 percent. Participation from community health cadres has increased by 125 percent, in line with the establishment of 12 new hospitals and five new clinics in the past year. The organisation has also introduced innovative service models, such as Floating Clinics (Klinik Apung), Islamic Boarding School Health Posts (Poskestren), and Emergency Medical Teams that have provided support during international emergencies, including the Myanmar earthquake and the humanitarian crisis in Palestine.

The replication and expansion of Muhammadiyah's health programmes are made possible by its commitment to pro-social values and modern management systems, ensuring long-term sustainability at local, national, and global levels.

F. Tentang Anak App: A Comprehensive, Expert-Based Solution for Optimal Child Development

By: PT Tentang Anak Bahagia

Since 2021, more than 1.5 million parents in Indonesia have used *Tentang Anak*, a multidisciplinary, science-based application designed to support the developmental needs of Indonesian families. Available free of charge and accessible at any time, the app promotes optimal early childhood development.

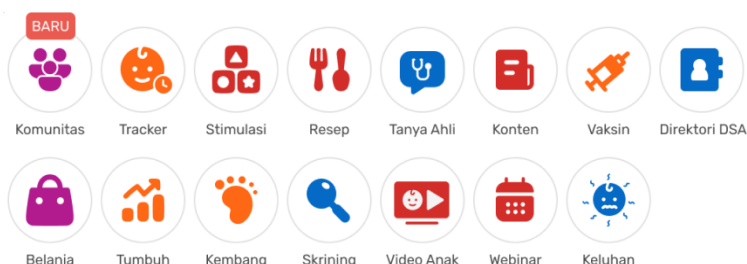

Given that 90 percent of brain development occurs within the first five years of life, ensuring proper nutrition, stimulation, and growth during this period is critical. These aspects can all be monitored and enhanced through *Tentang Anak*.

The application provides integrated, personalised, and science-backed support through several key features:

- Multidisciplinary educational content based on scientific evidence, including webinars with experts
- Tools to monitor growth and conduct early self-screening, including developmental and autism screenings
- Age-appropriate stimulation ideas and nutritious recipes
- Free consultations and directories of paediatricians in major cities

To date, *Tentang Anak* has supported more than 700,000 children, with key outcomes including:

- Eighty-six percent of children successfully maintaining or improving their nutritional status
- Screenings that revealed one in two children may be at risk for autism, and one in four has not yet achieved age-appropriate developmental milestones, prompting early intervention recommendations
- More than 160,000 parental questions answered directly by multidisciplinary experts

Looking ahead, expanding the impact of the app will require attention to population diversity and geographic disparities. To increase effectiveness, scientific content must be presented in a simple, practical, and relatable manner. Improving access to technology, particularly in underserved and remote areas, is also essential. To broaden its reach across Indonesia and beyond, Tentang Anak aims to scale up its digital platform and build strategic partnerships with government institutions and health service providers. These efforts will help accelerate the creation of a healthy and thriving future generation.

G. YOUNG HEALTH PROGRAMME: Empowering Youth to Prevent Non-Communicable Diseases in Jakarta

By: Plan Indonesia

The Young Health Programme (YHP) is a global initiative by AstraZeneca and Plan International that aims to prevent non-communicable diseases (NCDs) among adolescents and youth aged 10 to 24. In Jakarta, the programme has been implemented from 2021 to 2025 by Plan Indonesia in collaboration with Yayasan Lentera Anak, responding to Indonesia's high mortality rate due to NCDs. YHP targets adolescents, including those with disabilities, as well as healthcare workers, teachers, parents, and caregivers. Its goals include increasing health literacy, strengthening youth-friendly services, and promoting public policies that prioritise young people. The program supports SDGs 3, 4, 5, and 17.

YHP adopts a holistic, youth-led approach, beginning with peer educator training. More than one thousand youth, of whom 67 percent are female, have been trained using modules on NCD risk factors, reproductive and mental health, gender equality, and facilitation skills. These peer educators have facilitated interactive education sessions that have reached 82,000 adolescents across 40 secondary schools and 20 health facilities in West, South, East, and North Jakarta. Sessions used games, quizzes, and discussions to enhance engagement. Teachers and school staff were trained to integrate health messages into the Pancasila Student Profile Reinforcement Project (Proyek Penguatan Profil Pelajar Pancasila or P5), while health workers were supported to provide youth-friendly services at community health centres (Puskesmas) and adolescent health posts (Posyandu Remaja). The programme's advocacy component focuses on improving school health units (UKS), adolescent health services, and formal recognition of peer educators.

Challenges during implementation included limited support from parents, teachers, and community leaders, which often hindered the progress of peer-led campaigns. The need for peer educator regeneration as students graduate, and the lack of intergenerational inclusivity, also limited the programme's reach beyond school environments. Lessons learned emphasise the importance of collaboration among youth forums, adolescent health posts, and community health centres to ensure continuity. Integration of YHP modules into school curricula and extracurricular activities has also proven vital.

A program impact survey conducted in February 2025 revealed significant behavioral changes among A programme impact survey conducted in February 2025 showed meaningful behavioural shifts. Among respondents, 90 percent avoided smoking, 86 percent understood the dangers of alcohol, and 88 percent recognised the risks of air pollution. In terms of action, 72 percent engaged in at least one hour of physical activity per day, 60 percent consumed fruits and vegetables, 57 percent received reproductive health check-ups at Puskesmas, and over 73 percent rated Puskesmas services as more youth-friendly. The economic impact is reflected in greater youth participation in productive activities, while improved governance is demonstrated through successful policy advocacy that led to the inclusion of adolescent health components in local regulations.

YHP holds strong potential for replication. Future efforts include integrating modules into the national curriculum, ongoing training for peer educators and health workers, partnerships with the DKI Jakarta Education and Health Offices, and the formation of alumni forums to drive community-level change.

5 GENDER EQUALITY

G. STRENGTHENING THE ECONOMIC RESILIENCE OF WOMEN SURVIVORS AND AT-RISK COMMUNITIES ECONOMIC MENTORING

By: PT Kreasi Teknologi (Krealogi)

Krealogi by Du Anyam, in collaboration with the Ministry of Women's Empowerment and Child Protection (Kementerian Pemberdayaan Perempuan dan Perlindungan Anak or KemenPPPA), has implemented a women's empowerment programme through Micro, Small, and Medium Enterprises (MSME) entrepreneurship mentoring. This initiative addresses persistent gender inequality in Indonesia, particularly in terms of access, participation, and equitable development benefits. Through the Krealogi digital platform, women entrepreneurs receive structured training and mentoring to enhance their business capacities. To date, the programme has facilitated over 1,500 mentoring sessions across more than 500 regencies and cities, contributing to a more inclusive and sustainable business ecosystem.

The implementation begins with mapping participants' potential and challenges. This is followed by a series of training sessions on soft and hard skills, product innovation mentoring, and support to access markets through pitching to prospective buyers.

Challenges include limited internet connectivity, lack of business capital, and restricted market access. These are addressed through partnerships with local facilitators, strategic buyer connections, and the establishment of MSME communities as platforms for ongoing mentoring.

The programme has exceeded expectations, improving participants' business management capacity by 75 percent, surpassing the original target of 45 percent. A total of 15 new products were developed, and 635 products were sold, generating a total revenue of IDR 13,468,000. Additionally, approximately 7.6 percent of participants experienced increased income. The programme has been replicated in four regencies in East Nusa Tenggara, involving 500 participants. It continues to grow through the Krealogi MSME community as a post-programme sustainability strategy.

H. Sisternet: Supporting Women's Economic Independence and Participation

By: PT XL AXIATA Tbk

Sisternet is a digital women's empowerment initiative launched by XL Axiata in 2015. As of 15 April 2025, it operates under the name XLSMART. The programme aims to improve digital literacy, entrepreneurial skills, and mental health among women, including MSME entrepreneurs and young women leaders. Through continuous training across various regions, including women's correctional facilities, Sisternet works to reduce the digital divide between women and men in Indonesia. This initiative supports SDGs 5, 8, and 10.

The Sisternet app has reached over 1.2 million women in Indonesia and supported 4,000 women-led MSMEs.

Outcomes include up to a 13 percent increase in business revenue, a 75 percent improvement in digital marketing, and a 30 percent expansion in product offerings. These achievements have earned Sisternet recognition as a good practice at the G20 forum,

particularly within the EMPOWER group and W20 Indonesia

Sisternet offers programmes such as Business Incubation, the Smart Capital Competition, SheInspire for incarcerated women, and Female Future Leader for aspiring young women. The application also features FinansisTer (a financial inclusion service), educational articles, e-learning videos, and Toko Sister, a free marketing tool for women-led MSMEs. All features are designed to promote women's empowerment and economic independence through digital innovation.

Challenges in implementation include gaps in digital literacy and limited long-term engagement from participants. Experience shows that localised approaches, adaptive content, and strategic collaboration are essential to success. Following the success of Sisternet's business incubation and empowerment programmes, similar initiatives have emerged, contributing positively to the growth of women-led MSMEs in Indonesia.

I. Campus Caring for SDGs: Economic Empowerment for Persons with Disabilities

By: Center for Gender Studies Unesa and Disability Innovation Center UNESA

The State University of Surabaya (Universitas Negeri Surabaya or Unesa) contributes to SDG 5 through the best practice initiative "Campus Caring for SDGs: Economic Independence for Persons with Disabilities." Since its launch in 2022, this programme has also contributed to SDGs 3, 8, 14, and 17. It focuses on empowering in challenging socio-economic conditions and persons with physical disabilities, who often face barriers in accessing skills training and employment and continue to experience persistent social stigma.

The Center for Gender Studies at Unesa empowers rural women through skills training, the creation of community credit institutions, and economic mentoring. These efforts have enabled women to develop businesses based on local resources, increase household income, and strengthen their role in economic decision-making. The programme has faced challenges such as limited access to technology and restricted market opportunities. However, collaboration with MSMEs and local leaders has helped expand economic access for women.

The Disability Innovation Center at Unesa has developed batik training programmes to promote economic inclusion and decent employment for persons with disabilities. Participants gain skills in batik production and are supported in starting their own businesses or entering the labour market. This has helped shift societal perceptions and promote greater independence. Challenges remain, including inadequate accessibility in training facilities, which requires adjustments to teaching methods and equipment.

These programmes have demonstrated strong potential for replication in other regions. Sustainability depends on multisectoral policy support and collaboration among government, communities, and the private sector.

J. PITA MOLIN: Services, Information, and Consultation through the Protection Van

By: Technical Implementation Unit for Women's and Child Protection (UPTD PPA) at the Office for Community Empowerment, Women and Child Protection (DPPA) of Jambi City

In response to the high number of cases of violence against women and children that go unreported to the UPTD PPA, the Services, Information, and Consultation through the Protection Van initiative, known as PITA MOLIN (Pelayanan, Informasi dan Konsultasi melalui Mobil Perlindungan), was launched. This mobile service visits schools to provide education about violence and how to respond to it. Students are invited to consult and access services directly in the van, supported by experienced clinical psychologists, lawyers, and mediators. All services are offered free of charge and with full confidentiality.

In response to the high number of cases of violence against women and children that go unreported to the UPTD PPA, the Services, Information, and Consultation through the Protection Van initiative, known as PITA MOLIN (Pelayanan, Informasi

dan Konsultasi melalui Mobil Perlindungan), was launched. This mobile service visits schools to provide education about violence and how to respond to it. Students are invited to consult and access services directly in the van, supported by experienced clinical psychologists, lawyers, and mediators. All services are offered free of charge and with full confidentiality.

Challenges include a shortage of psychologists, limited time and human resources that hinder outreach to all schools, and reluctance among some schools to allow reporting due to reputational concerns. Despite these obstacles, the PITA MOLIN initiative has increased student awareness and willingness to report violence. Many previously hidden cases of child abuse have been uncovered and addressed thanks to the programme's outreach and support systems.

To ensure sustainability, institutional strategies such as the establishment of the PITA MOLIN Innovation Team have been adopted. Social strategies include ongoing collaboration with relevant stakeholders to strengthen services and expand reach.

K. Green Skills Programme: Young Women Farmer Entrepreneurship as a Solution to the Water Crisis in East Nusa Tenggara

By: Yayasan Plan Internasional

Since 2016, Plan Indonesia has implemented the Green Skills programme, an initiative designed to empower young farmers aged 18 to 29, with a focus on young women. This programme responds to the climate crisis that threatens agriculture in East Nusa Tenggara, where prolonged droughts, with more than 61 consecutive days without rainfall, have severely reduced agricultural productivity and increased vulnerability among local farmers, according to Indonesia's Meteorology, Climatology, and Geophysics Agency (BMKG).

In a context where men dominate access to agricultural resources, technology, and information, young women are often relegated to unskilled roles. Climate change has further compounded this inequality.

The Green Skills programme was introduced in 84 villages in South Central Timor Regency, a region selected for its high vulnerability to water scarcity. It aims to address three key challenges: identifying appropriate farming systems for dryland areas, converting idle land into productive land, and empowering young women to assume leadership roles in agriculture.

The programme contributes directly to SDG 2 through climate-resilient agriculture, SDG 6 through improved water conservation for irrigation, SDG 13 through community adaptation, and SDG 5 by ensuring equal access for women to agricultural resources and knowledge.

A vulnerability analysis informed the development of context-specific training modules, created by Plan International using gender-transformative principles to challenge restrictive norms and support young women's leadership.

The formation of Green Skills Committees, comprising both men and local leaders, provided ongoing support. Through these committees, women received guidance to establish and lead youth farmer groups. Climate-friendly infrastructure was also introduced, including drip irrigation systems that use up to four times less water, drought-resistant seeds, and solar-powered dew-capturing water generators.

The programme provided training in business planning, financial management, and market integration. Partnerships strengthened implementation. Village governments provided inputs and idle land. The South Central Timor government signed a memorandum of understanding. The local church allocated 50 hectares of land. Universities participated through the Thematic Entrepreneurship Student Service Programme. The private sector, including The Body Shop and Citibank Indonesia through Citi Peka, also offered support.

To date, the Green Skills programme has supported 1,337 young farmers, 64 percent of whom are women, across 84 villages. Sixty youth farmer groups remain active. Monthly incomes range from IDR 900,000 to IDR 6,000,000 per person. A total of 90 hectares of idle land have been cultivated. Innovations such as drip irrigation and solar panels have saved up to IDR 26 million in electricity costs over ten years.

Challenges include limited transport in remote areas, cultural barriers that restrict women's access to land and decision-making roles, and limited access to technical services for maintaining equipment. These gaps highlight the need for community engagement and capacity development.

Lessons from Green Skills suggest strong potential for replication in other climate-affected regions. Adapting the programme to local agroclimatic conditions and social norms, while integrating it into vocational school curricula and aligning partner support from the planning stage, could foster a generation of resilient and innovative women agricultural leaders and strengthen food security in Indonesia.

L. Data-Driven Advocacy Movement to Support SDGs Achievement, Advancing SDG Goal 5

By: Institut Kapal Perempuan

Since 2017, Institut KAPAL Perempuan, in collaboration with Equal Measures 2030 (EM2030), has led the “Data-Driven Advocacy Movement to Support SDG Achievement.” The initiative aims to generate and promote the use of gender-based and inclusive data to influence government and multi-stakeholder actors in policy-making, programming, and budgeting. It also seeks to strengthen awareness among women's groups, encouraging them to participate as both data producers and decision-makers in the push for gender justice.

A key strategy of the movement involves capacity building through advocacy training. These sessions are designed to improve understanding of how to use gender-responsive data for effective multi-stakeholder advocacy focused on achieving SDG 5 on gender equality. To date, 175 alumni from 16 regencies and cities across 11 provinces have completed the training. Participants include representatives from NGOs, grassroots women's groups, local governments, journalists, academics, and activists.

The movement has strengthened cross-sectoral capacities

for policy advocacy and data literacy. The programme promotes the use of tools such as the SDG Gender Index and legal literacy to address issues including child marriage. It has supported the drafting of governor circulars, regent regulations, and village-level policies for the prevention of child marriage. Data collection efforts have used Participatory Rural Appraisal to document trends in child marriage and the feminisation of poverty. In addition, the Eastern Indonesia SDG Collective Action Network was formed to advocate for inclusive data use and SDG achievement in the eastern region by 2024.

One persistent challenge is the lack of synergy among stakeholders at the sub-national level regarding the use of gender-based and inclusive data for advocacy. Despite this, the movement has made significant progress in raising awareness, strengthening capacity, and fostering multi-stakeholder collaboration to address the rights and needs of women and communities that have historically faced limited access to opportunities. It also serves as a mechanism for monitoring the implementation of existing policies. The movement has now been established in 11 provinces, where it continues to build momentum in support of inclusive and evidence-based development.

8 DECENT WORK AND ECONOMIC GROWTH

By: **YAYASAN KITABISA**

Teach4Hope is a program initiated by Yayasan Kitabisa in 2023 to address the structural challenges of youth unemployment and support communities facing socio-economic barriers, including persons with disabilities. According to Indonesian Bureau of Statistics (Badan Pusat Statistik or BPS) (February 2024), more than 7.2 million individuals remain unemployed, with vocational high school (Sekolah Menengah Kejuruan or SMK) graduates recording the highest unemployment rate (8.62%). At the same time, the Business Process Outsourcing (BPO) sector requires entry-level workers who can be trained. Teach4Hope was created to bridge the skills gap by providing vocational training aligned with market needs and demands. This program has made a tangible impact on households led by women, persons with disabilities, Indigenous communities, and young people affected by layoffs.

The programme is structured in three phases. It begins with one month of intensive training, followed by a two-month internship, and continues with six to nine months of job placement assistance. Funding is sourced from zakat, corporate social responsibility contributions, public donations, and outsourcing fees. Teach4Hope reflects a pentahelix collaboration model involving more than 60 recruitment partners, sub-national governments, academic institutions, communities, and media. Challenges include limited access to digital tools and the need for sustainable funding. These have been addressed through community-based networks and innovative financing approaches.

By the end of 2023, the programme had reached 923 participants in 18 provinces. Approximately 47 percent of graduates secured employment in fields such as digital administration, customer service, and green jobs, earning between IDR 3 million and IDR 7 million per month. The programme has made a tangible impact on households led by women, persons with disabilities, Indigenous communities, and young people affected by layoffs. The Social Return on Investment (SROI) was calculated at 1 to 3.57 US dollars.

Teach4Hope has now evolved into a full academy and is preparing to expand to 30 provinces. The goal is to train 3,000 job seekers by 2025 in support of SDG 8 on decent work and economic growth.

N. BUMMas Rumah Bambu Weragati

By: **Rumah Zakat**

Weragati Village holds significant potential in natural resources, particularly due to its proximity to villages rich in bamboo. This presents an opportunity to develop valuable handcrafted bamboo products. Recognising this, Rumah Zakat launched the Rumah Bambu Weragati Community-Owned Enterprise (Badan Usaha Milik Masyarakat or BUMMas) in 2020 as an economic empowerment initiative. The programme supports collective and professional management of bamboo resources to create sustainable jobs and foster self-reliance.

The initiative began with group formation and education about the programme. A legally recognised producers' cooperative was then established to manage business operations, ensure production sustainability, and expand marketing for bamboo crafts. Various technologies are used in production, including saw machines, bamboo splitters, drilling equipment, compressors, and computers for product design.

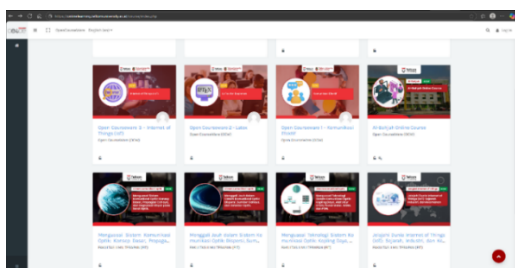

Challenges included securing sufficient capital to scale up production and marketing bamboo products, which must

compete with more popular materials such as plastic, wood, and acrylic. Despite these barriers, the programme has yielded strong economic, social, and environmental outcomes. About 50 percent of group members have risen above the poverty line and reported increased income. The programme has created jobs for ten individuals, empowered bamboo farmers, improved the village's reputation, and encouraged bamboo conservation through sustainable practices.

This initiative has strong replication potential in other bamboo-rich areas. By applying a community empowerment model that leverages local materials, it promotes inclusive and sustainable economic growth.

O. All-Learn (Inclusive Learning for All) Supporting Goal 8: Decent Work and Economic Growth

By: Telkom University

All-Learn is an inclusive learning platform developed by Telkom University since 2020 to support the digital transformation of micro, small, and medium enterprises (MSMEs) in Indonesia's Super Priority Tourism Destinations. The programme aims to enhance the quality of education through digital technology and targets academics, MSMEs, persons with disabilities, and the general public. It aligns with the 2024 to 2028 Strategic Plan and supports SDGs 4, 8, and 10.

All-Learn uses a blended learning approach that integrates digital platforms, online training, and inclusive innovation to serve persons with disabilities. Topics include digital literacy, marketing, finance, and digital business. The platform is supported by free internet access and augmented and virtual reality-based training, ensuring accessibility and adaptability for diverse users. Beneficiaries include MSMEs, students, disability communities, and the wider public.

Despite its reach, the programme faces challenges such as low digital literacy and limited infrastructure in remote areas. These challenges highlight the importance of strengthening inclusive, technology-based learning approaches and providing continuous mentorship.

The programme has reached 38 villages and served a total of 67,838 participants. Impacts include increased competitiveness for MSMEs, improved access to inclusive education for persons with disabilities and communities in underdeveloped regions, enhanced digital literacy, reduced social disparities, and stronger economic independence among MSMEs.

The initiative has strong potential for replication through Massive Open Online Course (MOOC) platforms. It can be further scaled through pentahelix collaboration and academic and industry-based funding support.

P. CULINARY CAMP : BUILDING THE FUTURE OF INDONESIA'S MSMEs

By: PT Sasa Inti

To help food and beverage MSMEs survive the impact of the COVID-19 pandemic, PT Sasa Inti launched the Culinary Camp programme in 2021. This eight-week initiative equips participants with practical knowledge in digital marketing, financial management, packaging strategy, and food safety. The programme is continuously updated through coaching and monitoring sessions to ensure relevance and effectiveness. The goal is to help MSMEs produce food products that are not only delicious and safe but also long-lasting and compliant with health regulations.

The programme uses a collaborative and step-by-step approach. It begins with training in digital marketing and financial management, supported by AIESEC. Food processing innovation is developed in collaboration with the Southeast Asian Food and Agricultural Science and Technology (Seafast) Center at IPB University. The Sterile Food Risk Management Programme is implemented with IPB's Food Technology Department and the Food and Drug Monitoring Agency (Badan Pengawas Obat dan Makanan or BPOM). Two MSMEs, Oma Keenan and MT Farm, received intensive support to prepare Good Manufacturing Practice (GMP) and Hazard Analysis and Critical Control Points (HACCP) documentation and to conduct sterilisation testing. The programme, ongoing since 2021, continues to this day.

toward safer food production. This programme has strong potential for replication in other food sectors. Its sustainability can be supported through cross-sector partnerships and regional expansion.

Key barriers to participation include the high cost and administrative complexity of the Risk Management Programme. Overcoming these challenges requires sustainable collaboration among academics, regulators, and practitioners

To date, the Culinary Camp has positively impacted more than 2,500 MSME entrepreneurs through online and offline training. It has led to increased product diversification, improved business skills, and higher sales. Two MSMEs have received PMR certification from BPOM, reflecting a positive shift

Q. Labour-Intensive Programme of Surabaya City

By: Surabaya City Development Planning Agency (Bappeda)

To address slowing economic growth, rising unemployment, declining MSME income, and widespread business closures, the Surabaya City Government launched the Labour-Intensive Programme (Program Padat Karya) in 2022. This initiative utilises city-owned assets to create job opportunities for underprivileged communities, helping to restore household incomes and revitalise community-level economic and social activities.

The programme is implemented through collaboration among various stakeholders. To support financing, the city government partnered with Rural Credit Banks (Bank Perkreditan Rakyat or BPR) and other financial institutions to provide low-interest capital. Business equipment was procured through corporate social responsibility initiatives. For marketing, Memoranda of Understanding (MoUs) were established with hotels, apartments, and government agencies to utilise and promote products created through the programme. This multi-stakeholder synergy strengthens sustainability and amplifies economic and social impacts for low-income communities.

A major challenge has been the inconsistency of worker motivation and work ethic, which can undermine programme continuity. To address this, the government incorporated an initial selection process to assess participants' interests, previous experience, and commitment.

Prior to the programme's launch, Surabaya's poverty rate in 2022 stood at 4.73 percent, and the open unemployment rate was 7.62 percent. By 2024, those figures had dropped to 3.96 percent and 4.91 percent, respectively. The Human Development Index rose from 82.74 in 2022 to 84.69 in 2024. Economic growth also improved, from 5.18 percent to 5.76 percent. The programme has now been expanded throughout Surabaya and has been replicated by local governments in Sidoarjo, Magetan, and Banyuwangi Regencies.

R. Processing Suckermouth Catfish in Lake Tempe

By: Hasanuddin University

This community empowerment programme focuses on utilising the growing population of suckermouth catfish (*Hypostomus plecostomus*) in Lake Tempe, which has become a dominant predator and disrupted local ecosystems. Local fishers in Limpomajang, Soppeng, have expressed concern as this invasive species threatens native fish stocks and is often considered to have no economic value. In response, Hasanuddin University launched a programme to empower local communities by processing the fish into marketable products, including fishmeal, pellet feed, and shredded fish.

The initiative began with focus group discussions involving coastal communities to assess ecological impacts and economic opportunities. This was followed by training on fish processing techniques, waste management, business operations, and digital marketing to support sales. A platform for fish collection and new business groups was also established to ensure a steady supply of raw materials.

The programme has produced positive economic, social, and environmental results. Products such as shredded suckermouth catfish and catfish pellets were successfully developed with strong market appeal and high nutritional content. Community knowledge of processing, packaging, and marketing has improved. Environmentally, the initiative has helped reduce pollution caused by fish carcasses and contributed to ecosystem restoration in Lake Tempe.

Challenges included low initial awareness, limited equipment and technology, unstable raw material supply due to weather, and low participation caused by scepticism over the fish's value. Key lessons include the importance of community education, technological innovation, and inclusive approaches.

This programme has strong potential for replication. With technological improvements, follow-up training, and support from government and private sector partners, communities in other regions can also turn environmental problems into sustainable economic opportunities. Institutional strengthening through cooperatives, digital marketing platforms, and exhibitions can further enhance impact.

14 LIFE BELOW WATER

S. Desa Lestari

By: Rumah Zakat

The Desa Lestari (Sustainable Village) programme, initiated by Rumah Zakat in 2020, is implemented in Kembang Village, Pacitan Regency. It was developed in response to environmental and disaster risks, particularly floods and tsunamis linked to the village's coastal location and its position at the downstream end of the Grindulu River. This sustained intervention seeks to create a balanced relationship between social welfare, economic growth, and environmental conservation, while enhancing the resilience of the local community.

The programme began with the formation of community groups that actively manage natural resources through participatory approaches. Key activities include the development of Mangrove Forest Edu-tourism, which integrates conservation with local economic development, shrimp pond cultivation to boost community income, mangrove seedling nurseries to support coastal rehabilitation, and a public campaign titled "Mangrove Tree Donation" (Sedekah Pohon Mangrove) that encourages reforestation and environmental education.

Challenges during implementation included shifting public mindsets, environmentally harmful economic practices, and natural factors such as coastal abrasion, climate change, and poor water quality. Despite these obstacles, the programme has had significant social, economic, and environmental impacts. It has raised public awareness and engagement, created new job opportunities, increased incomes, and reduced coastal land erosion by up to 200 metres. It has also contributed to biodiversity preservation.

The Desa Lestari model shows strong potential for replication in other coastal areas facing similar environmental and socioeconomic challenges. To ensure sustainability, the programme emphasises a community-driven approach..

T. Planting Hope on the Coast with KONSURV

By: IPB University

MSince 2011, the Department of Marine Science and Technology at IPB University has implemented the Marine Conservation and Field Survey initiative, known as KONSURV. Conducted along the West Java coast, KONSURV aims to preserve marine ecosystems through an inclusive and science-based approach. More than a mangrove planting campaign, the initiative combines environmental surveys, education, and community outreach to foster collective awareness of coastal conservation.

KONSURV adopts a four-stage strategy. It begins with the creation of a mangrove biodiversity data bank, followed by awareness campaigns, workshops, and hands-on activities such as mangrove planting and beach cleanups. The programme engages the general public, students, and community groups, and is implemented in close collaboration with local governments, schools, and partners. It directly contributes to the achievement of Goal 14 by promoting the conservation of marine and coastal ecosystems.

To date, KONSURV has planted more than 16,000 mangrove seedlings and restored 36 hectares of land across four regions. The restored areas now sequester up to 150 tons of carbon per hectare per year. The initiative has also involved over 1,000 local residents and generated a 30 percent increase in local economic activity. It has helped develop educational ecotourism and established a scientific data bank to support evidence-based environmental governance.

Challenges include limited public awareness of waste management, insufficient ecotourism infrastructure, and high seedling mortality caused by natural factors. Key lessons learned highlight the importance of continuous monitoring, community engagement, and strong cross-sector partnerships. With its proven impact and adaptable model, KONSURV holds strong potential for replication in other coastal areas. Its blend of education, data, and public participation offers a sustainable model for universities, government agencies, and environmental organisations committed to safeguarding marine ecosystems.

U. Sustainable Undersea Cable Operation and Carbon Offsetting Initiatives

By: PT Telkom Indonesia

Since 2022, PT Telkom Indonesia has implemented the Sustainable Undersea Cable Operation initiative to minimise the ecological impact of its 250,000 kilometre undersea cable network, 60 percent of which lies within Indonesian waters. The initiative promotes marine ecosystem conservation, strengthens climate resilience in coastal areas, and supports local economic development through nature-based solutions. It contributes to the achievement of Sustainable Development Goals 14 and 8 by integrating conservation, low-carbon technology, and inclusive community engagement into telecommunications infrastructure management.

Telkom Indonesia employs innovative approaches such as using cement bag technology to create coral growth substrates, constructing fish houses to mark cable routes, and introducing artificial marine habitats made from shell waste. The company also provides training for coastal communities on marine conservation and the sustainable use of marine resources.

To date, the initiative has involved 680 community groups as partners and direct beneficiaries. Collaboration with the SDGs Centre at Diponegoro University and Telkom University supports the monitoring and evaluation of carbon offsetting outcomes. Results include the rehabilitation of 46 hectares of mangrove forest, construction of 871 coral reef structures, and the sequestration of more than 61,000 tonnes of carbon dioxide equivalent annually.

The initiative has enhanced public awareness, improved community well-being, and supported the development of inclusive and sustainable governance for undersea cable operations. With strong cross-sectoral collaboration and measurable ecological and social benefits, the programme has significant potential for national replication. Integration into marine spatial planning and expansion through multisectoral partnerships can ensure long-term impact and resilience.

V. Greening Indonesia Together

By: Lindungi Bumi Nusantara

Since 2016, LindungiHutan has led a collaborative tree-planting movement to restore coastal and inland areas affected by erosion, flooding, and deforestation. The initiative unites individuals, communities, organisations, and private sector partners through a digital platform, advancing climate action and ecosystem rehabilitation in line with Sustainable Development Goal 13.

The programme relies on community empowerment and digital innovation. Village farmers are trained as reforestation agents, while online campaigns involving consumer brands mobilise public participation. The lindungihutan.com platform enables users to track tree growth, ensuring transparency and accountability.

To date, more than one million trees have been planted, protecting 75 hectares of coastline and increasing the income of 576 partner farmers by 23 percent through incentives tied to planting activities. These results demonstrate both ecological and economic benefits.

A key challenge is maintaining long-term public engagement. Promoting tree planting as a lifestyle requires continuous communication, creative outreach, and intergenerational collaboration. These lessons inform ongoing efforts to sustain awareness and participation.

With its technology-driven model and focus on community inclusion, the programme is ready for replication across Indonesia. By mapping climate-sensitive regions, building new partnerships, and expanding digital engagement, this initiative supports a greener and more climate-resilient future for the country.

W. Fish Bank Indonesia: A Community-Based Solution to Coral Reef Degradation in Banyuwangi

By: Yayasan Semai Sinergi Umat

In the coastal communities of Bomo and Badean Beach in Banyuwangi, East Java, coral reef degradation caused by unsustainable fishing practices has led to habitat loss and declining fish stocks, directly affecting the livelihoods of local fishers. To address this, Yayasan Semai Sinergi Umat launched the Fish Bank Indonesia programme to restore marine ecosystems while strengthening fisher organisations and economic resilience.

At the heart of the programme is an innovative fish bank bamboo module. Constructed using locally sourced materials such as coconut husks, bamboo, and coconut fibre rope, the modules serve as artificial reefs that support coral regeneration and provide shelter for marine life. As coral habitats recover, fish populations rebound, improving the incomes of local fishers.

Beyond environmental restoration, the programme supports organisational development for fisher groups, introducing governance structures, microbusiness development, and marine ecotourism. Initiatives such as Cahaya Sedekah Nelayan provide social safety nets, while new tourism activities offer alternative sources of income and reduce dependency on fishing.

Challenges include sustaining fisher commitment to conservation and developing tourism infrastructure and services. Addressing these requires creative approaches and targeted support.

Fish Bank Indonesia demonstrates how ecological restoration, economic improvement, and community empowerment can be integrated. With proper adaptation to local conditions and continued guidance, the model can be replicated in other coastal areas to promote sustainable fisheries and resilient coastal communities.

X. COMMUNITY EMPOWERMENT TRAINING BY BANTEN MARITIME POLYTECHNIC

By: Banten Maritime Polytechnic

Since 2016, the SDGs Centre at Banten Maritime Polytechnic has implemented community empowerment programmes aimed at improving the livelihoods of coastal residents in Tangerang Regency, Banten Province. Focused on enhancing educational quality and vocational skills, the initiative supports Sustainable Development Goals 4 and 8 by promoting inclusive education and decent work opportunities

The programme offers free, certified competency-based training for coastal communities, most of whom work as fishers. Training courses include Basic Safety Training, Advanced Fire Fighting, Medical First Aid, and Safety Awareness Training, all essential for maritime professions. These certifications enhance safety standards and improve employment prospects, especially for individuals in underserved areas.

Challenges remain, including a shortage of qualified instructors, limited access to safety equipment, and low public awareness about the value of education. These issues underscore the need for ongoing community engagement and investment in training infrastructure.

To date, more than 2,000 people have benefited from Banten Maritime Polytechnic's efforts to deliver quality education and expand employment opportunities for underprivileged coastal communities in the Banten Province. The programme reflects a strong commitment to advancing SDG 4 on quality education and SDG 8 on decent work and economic growth.

Y. MECOK Ecopark Mangrove Ecotourism – Diponegoro University's Mini SDGs Park in Teluk Awur, Jepara: KeSEMaT'S Synergy in Mangrove Ecosystem Management

By: KeSEMaT

In response to the severe degradation of Jepara's mangrove ecosystems, where 90 percent had been damaged by 2001, the Mangrove Ecosystem Study Group of Teluk Awur, known as KeSEMaT, was established with support from Diponegoro University. What began as a local conservation initiative has grown into MECOK Ecopark, a nationally recognised centre for mangrove education and rehabilitation.

KeSEMaT uses an inclusive educational approach that fosters community participation and builds partnerships with government agencies, universities, and civil society. Since its founding, the group has planted more than 1.2 million mangrove seedlings from 34 species, rehabilitated over 3 hectares of critical land, and constructed a 300 metre mangrove trekking path. This path is part of the Mini SDGs Park, which provides an interactive space for environmental learning and public engagement.

The programme has faced challenges, including land-use change, coastal pollution, and pressure from development. Nevertheless, KeSEMaT continues to lead conservation efforts through public campaigns, training programmes, and policy advocacy. In recognition of its impact, the initiative was nominated for the prestigious Kalpataru Award in 2019.

MECOK Ecopark currently sequesters up to 2,500 megagrams of carbon per 5 hectares, has increased mangrove cover by 90 percent, and has contributed to a 70 percent rise in ecotourism visits. The initiative has improved local incomes, enhanced coastal protection, and built community awareness of environmental conservation.

With the involvement of more than 300 partners and 1,000 volunteers, KeSEMaT's participatory model offers strong potential for replication in other regions. It stands as a powerful example of how academic institutions can support sustainable ecosystem management and empower coastal communities.

17 PARTNERSHIPS FOR THE GOALS

A. Multisectoral Approach to Inland Fisheries Management in Sukabumi Regency By: FAO Indonesia

Sukabumi Regency, with its network of rivers that flow into the Indian Ocean, is home to diverse inland fishery resources, including a significant eel population. However, limited coordination among agencies, weak community participation, and the absence of reliable data have hindered sustainable fisheries management. To address these challenges, FAO Indonesia supported the establishment of a cross-sector forum from January 2022 to September 2024 to strengthen inland water governance through collaborative action.

The process began with a series of facilitated meetings between regency and provincial governments, which led to the formation of a Technical Working Group. This forum brings together government institutions, communities, the private sector, and civil society organisations to share data, discuss issues, and develop locally appropriate policies.

Training was provided to fishers and local communities on catch data collection, fish species identification, and basic conservation practices. The data collected is used to inform discussions within the Technical Working Group and guide the development of responsive and inclusive policy recommendations.

The initiative also included workshops on designing pollution reporting mechanisms, addressing harmful fishing practices, and advocating for the installation of fishways in irrigation infrastructure. These efforts resulted in the enactment of Regional Regulation Number 1 of 2023 on Inland Fisheries Management, along with three Regent Regulations and two supporting decrees. Additional support came from corporate social responsibility programmes and community-based monitoring systems.

This approach demonstrates the importance of inclusive coordination platforms, community capacity building, and integrated policy development. With political commitment and sustained local funding, the model can be replicated in other regions with similar inland fishery challenges.

B. Indika Foundation Impact Grant By: Indika Untuk Indonesia

The Indika Foundation Impact Grant is a collaborative programme that brings together 50 organisations across Indonesia over a nine-month period to promote positive peace at the local level. The initiative aims to strengthen organisational capacity, support locally led actions and encourage mutual cooperation in line with Sustainable Development Goal 17 on partnerships for the goals.

The programme uses a participatory and community-based approach that allows partner organisations to independently design and implement peacebuilding initiatives based on local needs, wisdom, and context. Activities involve diverse local stakeholders, promoting

inclusive dialogue and collective problem solving.

Digital tools are used throughout the programme for documentation, reporting, and local media outreach. To date, the initiative has reached more than 10,000 individuals, including youth, teachers, parents, and community members in 16 provinces. It has enhanced critical thinking, socio-emotional skills, and community engagement on key social justice issues. Organisations participating in the programme have improved their capacity through project management training, network expansion, and access to broader support. However, challenges remain, such as aligning diverse issue areas, managing digital collaboration, bridging capacity gaps, and ensuring effective knowledge sharing.

To sustain impact, the Indika Foundation has built a collaborative ecosystem that supports 416 organisations in 31 provinces. The foundation continues to promote broader cooperation through engagement with stakeholders from government, civil society, academia, the private sector, and the media.

C. EDUTABMU: Working Together to Deliver Quality Education

By: Lazismu

Edutabmu is an innovative education initiative developed by Lazismu to support the achievement of Sustainable Development Goal 4 on quality education. Recognising that no single institution can address educational inequality alone, the programme emphasises strategic collaboration to deliver technology-based learning solutions that reach underserved communities.

The initiative is built on a partnership between Lazismu, the Elementary and Secondary Education Council of Muhammadiyah Central Leadership, Enuma Inc., and The HEAD Foundation. Lazismu provides funding and grassroots-level organisation. The Education Council contributes a nationwide school network and insight into local needs. Enuma Inc., a technology company based in the United States, supplies interactive, offline-accessible digital content. The HEAD Foundation offers expertise and additional funding support.

Edutabmu distributes educational tablets loaded with interactive learning materials in literacy, numeracy, and language. Implementation includes school needs assessments, device distribution in ten provinces, and teacher training, all tailored to local contexts. The programme runs over a three-year period from 2021 to 2024.

Each partner contributes a distinct role, creating a model of complementary collaboration. This structure has enhanced learning access for children in remote areas and strengthened teaching capacity. Evaluation using the Social Return on Investment method showed that all participating schools generated positive social impact.

Edutabmu offers a replicable example of value-driven, technology-based education that delivers measurable outcomes. It shows how well-designed partnerships can create inclusive, scalable, and sustainable solutions in education.

ANNEX III

LIST OF PARTIES INVOLVED IN THE PREPARATION OF VNR INDONESIA 2025

(1) Focus Group Discussion (FGD) on the Substantive Discussion for the Preparation of the 2025 VNR and Initial Coordination for Indonesia's Participation in the 2025 APFSD

Date: 16 January 2025

Led by: Senior Adviser to the Minister of National Development Planning on Social Affairs and Poverty Reduction as Head of the SDGs National Secretariat

Attended by:

- Ministry of National Development Planning/Bappenas
- Ministry of Marine and Fisheries
- Ministry of Foreign Affairs
- Permanent Mission of the Republic of Indonesia to the United Nations in New York (PTRI New York)
- GIZ Indonesia
- UN Agencies
- Statistics Indonesia
- National SDGs Secretariat

(2) Kick-Off for the Preparation of the 2025 Voluntary National Review (VNR)

Date: 5 February 2025

Led by: Vice Minister of PPN/Vice Head of Bappenas

Attended by:

- SDGs Center: University of North Sumatra (USU), University of Kaltara, Artha Wacana Christian University, Andalas University, Sepuluh Nopember Institute of Technology (ITS), Brawijaya University, Tanjungpura University, Manado State University, Telkom University, Sultan Ageng Tirtayasa University (Untirta), Banten, Sustainability Center, Pertamina University, Borneo Tarakan University, Gorontalo University, Mulawarman University, Muhammadiyah University of East Kalimantan, Djuanda University, Widya Kartika University, Surabaya, International Institute of Tourism and Business, Bali, Syarif Hidayatullah State Islamic University (UIN), Jakarta, Jember State Polytechnic, IDS Digital College, Statistics Polytechnic
- Kampung Lali Gadget
- APPERTANI
- PEKKA
- Jaringan Pemantau Pendidikan Indonesia (JPPI)
- INFID
- LAZISNU PBNU
- Lajnah Kajian dan Pengembangan Sumber Daya Manusia (Lakpesdam) PBNU
- Yayasan KitaBisa
- Yayasan Dompot Dhuafa Republika
- Yayasan Penabulu
- The SMERU Research Institute
- UN Association Indonesia and YUSEA
- Audit Board of the Republic of Indonesia
- Statistics Indonesia
- Ministry of Foreign Affairs
- Ministry of Home Affairs
- Ministry of Health
- Ministry of Women Empowerment and Child Protection
- Ministry of Manpower
- Ministry of Villages, Disadvantaged Regions, and Transmigration

- | | | |

Fostering Inclusive Growth: Advancing
Sustainable and Resilient Indonesia
